

Scirpus cyperinus

Wool-grass

One of the showier bulrushes, with large, arching heads of woolly spikelets. The bulrushes are grass-like plants, growing in clumps in wet meadows, swamps, shores, and in shallow water. They are important food and shelter plants for waterfowl and wildlife.

Suggested companions: other bulrushes, sedges (*Carex* sp.), soft-stemmed rush (*Juncus effusus*), arrowhead (*Sagittaria latifolia*).
